

# SAW YE HTET

Application Support Engineer

sawyehtet.dev@gmail.com · +65 8029 9573 · Singapore · sawyehtet.com · linkedin.com/in/sawyehtet

## ABOUT ME

---

Singapore Polytechnic IT graduate, comfortable with SQL, Python, and Linux. Troubleshoots software methodically, documents the fix, and turns rough requirements into specs developers can build from. Looking for Application Support, QA, or Service Desk roles at a consultancy or larger enterprise.

## WORK EXPERIENCE

---

### Research Assistant & Software Developer

April 2025 – Feb 2026

*Centre of Excellence in Maritime Safety (CEMS)*

- Resolved performance bottlenecks in a Unity VR application, achieving a consistent 72 FPS through systematic profiling, frame analysis, and targeted optimization
- Gathered requirements from maritime subject matter experts, translated operational procedures into technical specifications, and validated features through structured user testing
- Owned end-to-end QA and documentation across multiple hardware configurations (Meta Quest 3, bHaptics gloves), ensuring consistent behavior and full test coverage

## EDUCATION

---

### Diploma in Information Technology

March 2023 – Feb 2026

*Singapore Polytechnic*

- CGPA: 3.55 / 4.0
- Certificate in IoT (electives in Python, sensor interfacing, 5G/AIoT)

## SKILLS

---

|                         |                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Databases</b>        | SQL (comfortable writing queries)                                                                                          |
| <b>Scripting</b>        | Python, JavaScript, Bash                                                                                                   |
| <b>Tools &amp; Tech</b> | Git, Postman, VS Code, Linux command line, REST APIs, HTTP debugging                                                       |
| <b>Platforms</b>        | Unity, C# (working knowledge)                                                                                              |
| <b>Methods</b>          | Systematic troubleshooting, root cause analysis, technical documentation, stakeholder communication, cross-browser testing |

## PROJECTS

---

### Tokey (Real-time token cost tracker for Claude Code)

Python · Open source

[github.com/sawyairhtet/tokey](https://github.com/sawyairhtet/tokey)

- Shipped to GitHub with 73 passing tests covering JSONL transcript parsing and live-state edge cases
- Engineered a poll-based transcript reader with a pointer-file shim for per-prompt cost tracking, surfaced through a live terminal panel
- Documented design decisions across the full spec-to-release cycle and maintained a clean, atomic Git history through the v0.1 release

### Personal Portfolio & Technical Writing

React 19 · TypeScript · Vite

[sawyehtet.com](https://sawyehtet.com)

- Designed and deployed a writing-first personal site with a dedicated work section for recruiters
- Validated responsive behavior across browsers and devices, logging reproduction steps for each issue found
- Maintained a clean Git history with atomic commits, enabling traceability and rollback
